Positive Behaviors Interventions & Supports as One Aspect of a Trauma-Informed Approach in a Continuation School. 02/20/2018. Damon, J. Retrieved 4/5/2018 from http://csusm-dspace.calstate.edu/bitstream/handle/10211.3/200382/DamonJillian_Spring2018.pdf?sequence=3

From the data sources [stakeholder interviews, focus group interview (FGI), and non-verbal cues from the FGI] analyzed, four emergent interconnected and interdependent themes emerged. These include: Relationships, Flexible & Solutions Based, Support Outside Academics and School Connection.

This qualitative research study examined Positive Behavior Interventions and Supports (PBIS) as a strategy to support Senior (grade 12) students at a continuation high school. It also sought to determine if using PBIS, as one aspect of a trauma-informed approach, influences students' feelings of connection surrounding school in general.

Findings suggest the school is using PBIS as a tiered approach to support students in reaching their maximum academic and social success, which in turn enhances their connection to school. The concluding hope as a result of consideration of these findings is that these skills transfer to students' post-secondary endeavors.
